

Statistics Service Project Rubric – Third Survey Draft

Questions	10	
Separates questions temporally (first half of survey is prior to Community First, second half of survey is after moving onto the property).	5	
Question order is arranged based on suggestions by Dr. Paxton (ex: Typically income is the very last question asked on U.S. surveys. Also, demographic questions are usually asked at the end of surveys).	5	
Answer Choices	9	
Consistent in whether numbers are provided for their reference (e.g., 1-5) and avoids putting a descriptor (moderately) along with an actual number (twice).	3	
Refines the ‘alcohol and drug’ questions to address the number of drinks a day or week.	3	
Answer choices are more fine-grained where possible, according to Dr. Paxton’s comments. As an example, asking their age is better than asking their age in categories.	3	
Overall	6	
Use simple language where possible	2	
Clearly indicates how one element from each of the other four group surveys has been incorporated	4	
Total	25
